

Special needs, require a special service...

service!

Within our comprehensive list of products in seamless stainless steel pipes and tubes, one can find a range of corrosion resistant duplex and super-duplex grades (ferritic-austenitic) produced by using a combination of hot extrusion and cold pilgering or the pierce and draw processes.

These grades are used extensively within many chemical, petro-chemical, urea plants, refineries, power-generation facilities and for OCTG applications.

We typically offer our special stainless grades DMV 22.5(S31803), DMV 25.7(S31260) and DMV 25.7N (S32760) for highly corrosive environments. These are complemented by grades of austenitic and nickel based alloys to provide materials for most critical applications.

We also make tubular goods available in customised “total material packages” offered through the strength and capacity of ThyssenKrupp VDM material competence to be included with their plate, bar and welding consumables.

Diversity is our strength

Headquarters and International Sales:

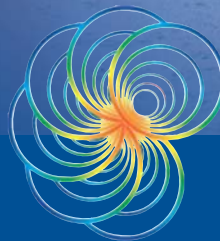

DMV Stainless SAS

Tour Neptune F-92086 Paris La Défense, France
