

We've just the seamless nickel alloy pipes and tubes you want!

Within our comprehensive list of seamless stainless steel pipes and tubes, you will find a range of nickel alloy tubulars to suit the requirements of the power generation plant and equipment manufacturers.

Typically we offer our NiCr grades DMV 800, DMV 825 or DMV 600 for standard heat and corrosion resistance applications and NiCrMo grades such as DMV 59 (UNS N 06059), DMV C276 and DMV 625 for more highly sophisticated applications.

The corrosion and wear resistance metallurgy of our seamless pipes and tubes can withstand a great variety of media.

Our pure nickel grade DMV 200 and NiCu alloys like DMV 400 make our supply listings complete.

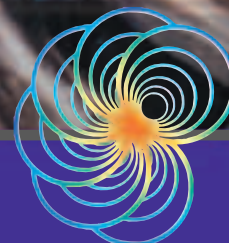

We also make tubular goods available in customised "total material packages" offered through the strength and capacity of Thyssen-Krupp VDM to be included with their plate, bar and welding consumables.

Diversity is our strength

Headquarters and International Sales:
